https://www.linkedin.com/in/sanchay-jain-5bb117318/
github.com/Sanchay0123

Skills

Languages
C++, Python, Bash, HTML/CSS

Operating Systems
Advanced Linux Administration (Arch Linux, Kali Linux, Ubuntu), Custom Environment Configuration (Hyprland), Windows.

Tools & Utilities
Render, FFMPEG, CMAKE, Postgres, Git

Certifications

Google Cybersecurity Professional Certificate
Google

Python for Cybersecurity
Infosec

Networking Basics and TCP/IP Fundamentals
Packt

Operating System Fundamentals
Akamai

Python Fundamentals
Infosys

Interests

- **Developing custom open-source security utilities.**
- **Continuous learning in threat intelligence.**

Education

Bennett University — Bachelor of Technology
Computer Science — Greater Noida • Aug 2024 to May 2028 (Expected)

- Focused studies in Cybersecurity, network vulnerability assessment, and anti-forensics.
- Strong academic foundation in C++ programming, algorithmic optimization, and Linux system administration.

Projects

Veritas Stream — Jan 2026 to April 2026
Lead Developer in a team of 4

- **Architected a full-stack Django application** for deepfake detection, featuring a secure file-quarantine system and automated SHA-256 hashing to prevent duplicate processing and database collisions.
- **Built a defense-in-depth verification pipeline** combining pure mathematical forensics (Error Level Analysis), invisible metadata extraction, and dual-brain neural network classification.
- **Secured the forensic ledger** by implementing automated RSA digital signatures for all analyzed image reports.
- **Engineered a multi-stage AI ensemble pipeline** leveraging PyTorch and Hugging Face Transformers to detect state-of-the-art synthetic media, including GAN face-swaps and modern Diffusions.
- **Integrated traditional digital forensics** by building automated Error Level Analysis (ELA) mathematical pixel-variance calculators and EXIF/metadata extraction to catch heavily scrubbed AI footprints.

TrustChain — Aug 2025 to Sep 2025
Backend and IOT developer in a team of 5

- A supply chain management system leveraging IOT and blockchain as core technologies to prevent counterfeit medicines in the market.
- Used IOT as live sensors for medicine storage analyser and reporter to everyone connected to that particular batch of medicines from manufacturer to end consumer
- Used Blockchain as an immutable ledger to enhance transparency and streamline liscensing issues and counterfeit issues
- Came in 5th in the SmartBU Hackathon among 400 teams.

https://trustchain-webpage.vercel.app

Stegscan — Aug 2025 to Dec 2025
Project Lead in a team of 3

- Developed **Stegscan**, a steganography detection tool to identify hidden data in image and media files using statistical and signature-based analysis.
- Implemented detection techniques for **LSB steganography and metadata anomalies** across multiple file formats (PNG, JPEG, BMP).
- Automated bulk scanning of files to flag potential covert data exfiltration attempts.
